COMPRESSOR STATIONS / PRODUCT TANKS & VESSELS / INDUSTRIAL BUILDINGS /
ASBESTOS & MOULD ABATEMENT / WASTE REDUCTION & RECYCLING / ASSET RECOVERY &
SALVAGING / SITE RESTORATION

To meet exacting oil and gas industry regulatory standards, NuWave's expert teams provide cost-effective solutions for assets and facilities that must be safely decommissioned. NuWave's experienced team members have worked with Asbestos, Chemicals, Dusts, Insulation, Liquids, Plastics, Steel and Wood.

Site visits and inspections identify all salvageable equipment, and ensure pipelines and pumps are sealed, any residuals are isolated and treated, and all equipment is properly deactivated.

NuWave's demolition experts have years of experience in both construction and demolition. Ultimately, the safest way to disassemble a structure is to understand how it was assembled. We quickly identify processes and the sequence of events to maximize efficiency and results.

We formulate a comprehensive, site-and-task-specific health and safety plan for every stage, to ensure a safe and successful decommissioning project.

NuWave has the experience and is equipped to handle projects of any size and complexity. Managing all waste streams and recoverable recyclables and processed metals can be economically sorted and delivered to recyclers for available credits.
