MOBILE WATER JET RADIUS & TRACK CUTTING

MOBILE WATER JET RADIUS & TRACK CUTTING

TANK WINDOWS / TANK FLOORS / FLAT SURFACES
TANK ROOF / WINDMILLS / EXCHANGER CUTTING / MINING

The integration of high-pressure hydro-cutting with a tracked mobile carrier has resulted in a system that is fast, non-labor intensive, and adaptable to most any cutting needs.

In one pass NuWave cuts through both tank coatings and the multi-layer steel tank floors. Cutting off a roof or cutting the shell above the wall ring is also easy by adapting the pneumatic and magnetic tracking system to allow the crab crawler to securely and accurately make the the cut.

NuWave's mobile high-pressure hydro-cutting, pumps, hoses and reels are all configured to facilitate rapid setup and rig-down. The individual cutting nozzles can cut through .25-inch plate at speeds up to 2.5 feet per minute in real-world working conditions.

MINING: Capabilities of cutting most thicknesses, grades and compositions of steel.

WINDMILLS: Pile removal, capable of cutting fiberglass if needed.

EXCHANGER CUTTING: Shell cutting, bolt & nut cutting up to thicknesses of 6" thick steel, tube cutting once removed from shell.

TANKS: Windows, floors, roofs, flat surfaces.
